

Software Developer

12.2018

The digital marketing firm, Brandography, offers a creative work environment, exposure to a diverse variety of projects, and tremendous opportunities for professional growth.

Brandography is currently seeking a software developer with Magento (primary) and Wordpress (secondary) experience. This position will provide a foundational role within the organization and offer growth in expertise and pride as quality development is key to Brandography's products and services.

(Please note this position is for a software developer. A web designer is not needed at this time. We request that only those who are experienced in software development apply. Please do not apply if you are only able to work remotely as on-site work is required.)

Responsibilities Include:

- Implementing, troubleshooting, and bug fixing custom and third-party Magento extensions
- Building extensions and custom integrations with external systems and APIs
- Applying core updates and other maintenance duties for Magento and WordPress
- Front-end and custom themes for Magento and WordPress
- Infrastructure operations, including experience with continuous delivery
- Collaboration and code review with team ensuring project quality and timeline
- Ensuring code quality via thorough testing
- Assistance in formulating detailed project plans for use in proposals and project roll-out
- Evaluation of interface designs to ensure alignment with development best practices and adherence to project scope
- Providing quality development services to seamlessly align with creative design and UX specifications

Works Traits:

- Highly positive attitude and approach to fast-paced, multi-tasking work environment is necessary
- Developed project management skills
- Strong understanding of good user experience integration
- Ability to communicate effectively on project progress and work well independently and within a team
- Maintaining a positive approach when working with legacy code and/or projects
- Sharing relevant technical and industry information and expertise
- Ability to collaborate and coordinate with account managers, creative, content, SEO, and other departments in conjunction with development projects
- Strong organization, problem solving, and attention to detail
- Strong written and verbal communication skills, both with internal teams and with clients
- Ability to identify and clearly communicate project needs, timelines, resources, and more to ensure timely and accurate completion of projects
- Commitment to continual learning, both in personal skills as well as web best practices, tools, methods, and more

Education/Experience:

- Degree in computer science, technical education, or work experience equivalent
- 3+ years of experience in web or app development, with moderate to strong knowledge of multiple programming languages and content management systems
- Accomplished expertise with Magento (primary) and Wordpress (secondary) is necessary
- Understanding of a modern revision control system as well as a deployment system such as Bit Bucket and Git

- An understanding of Angular, Cake PHP, Laravel
- Experience with task management systems (Trello, JIRA, Asana, Basecamp) preferred

This describes you:

- You are team-oriented and always willing to take on whatever is needed for the team to succeed. Our team is supportive.
- You have an ability to address issues that arise with a positive and solution-oriented mindset, we're in the business of solving problems. Our team is constructive.
- At Brandography we believe that drama precludes great customer service, so we prefer to constrain our drama to reality TV, where it belongs. Our team is nondramatic.
- You are actively growing in your career and life and are excited to join a team of pros who are doing the same. Our team is driven.
- You say what you mean and mean what you say. Avoiding drama requires us to be open and honest. Our team is genuine.
- You love to stay up to date in a constantly changing industry and frequently recommend new areas of growth and opportunity. Our team is forward-thinking.
- You have good written communication skills, to perhaps include content writing and technical writing.
- You have a deep understanding of current SEO/SEM practices and are familiar with the elements required for success.
- You can manage multiple projects and priorities at once.

Interested software development applicants are requested to please email cover letter noting salary requirements, resume detailing software development experience, and samples of work.
